

Certification

Certification	Tool Certification to DIN ISO 9001	A.2
---------------	------------------------------------	-----

Introduction

Precision tools by Weidmüller are in use all over the world. This is a responsibility Weidmüller takes seriously, offering comprehensive services to support this global use.

Tools in daily use should always guarantee consistent processing quality even after many working cycles. This is why Weidmüller offers its customers the “Tool Certification” service. This technical testing procedure is Weidmüller’s warranty for the functionality and quality of its tools.

The following pages provide a summary of our current range of services.

Regular quality checks of Weidmüller processing tools and the assemblies made with them guarantee optimum safety. In order to keep it that way and to prevent possible machine stoppages during production, regular maintenance and precise tool calibration is simply indispensable.

In order to receive a certified tool, customers have the option of either returning an existing Weidmüller tool for re-certification, or of purchasing a certified Weidmüller tool on submitting a new order.

Certification includes:

- Conductor extraction force testing according to relevant DIN regulations
- Issue of a test certificate with corresponding identification number and allocated customer number
- Recommendation for the next certification date; special testing intervals available on request

Tool Certification to DIN ISO 9001

Weidmüller vouches for the functionality of its tools – in written form – with a comprehensive test certificate and a test label. Furthermore, Weidmüller issues a laser-inscribed identification number to each tool leaving the factory; and on request, the tool is also supplied with the documentation for the customer's own DIN ISO 9001 quality control procedures.
