Polymer optical fibre (POF)	D.26
Cable tie tools	D.27

Crimping

After stripping, appropriate contacts or wire end ferrules can be crimped to the cable end.

Crimping produces a reliable connection between conductor and contact, and has more or less completely replaced soldering.

D Crimping describes the production of a uniform, non-detachable connection between conductor and connecting element. This should be achieved exclusively by the use of a high-quality precision tool. The result is a safe, reliable connection in both electrical and mechanical terms.

Weidmüller offers a wide product range of mechanical crimping tools.

An integral ratchet mechanism with disengaging option guarantees optimum processing quality. Crimp connections produced with Weidmüller tools comply with international standards and specifications.

Crimping of wire end ferrules

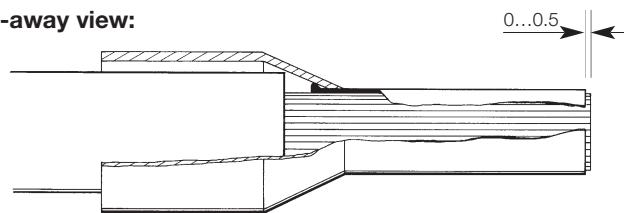

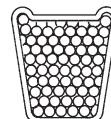

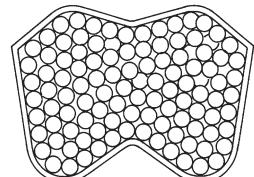

Optimum crimp of different cross-sections as an example

Examples for the visual inspection of a crimp connection with manual and automatic crimping tools by Weidmüller:
The conductor insulation must be pushed into the plastic collar.
The ferrule sleeve must be completely filled by the conductor.
Depending on the cross-section, the conductor should protrude approx. 0 ... 0.5 mm from the ferrule sleeve.

Front view:

0.5 mm²0.75 mm²1.0 mm²1.5 mm²

Cut-away view:

2.5 mm²4.0 mm²

For cross-sections 6...50 mm², the crimping shape is approximately the same.

Faulty crimping connections due to incorrect combination of cable and wire end ferrule

It is not possible for a tool to function reliably with every combination of conductor and crimping material.

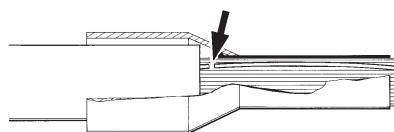

It is possible that the standard requirements for the crimped product can't be achieved, although taken on their own, both conductor and crimping material comply with the corresponding standard. The individual production tolerances of con-

ductor and crimping material do not allow every conductor to be combined with every contact.

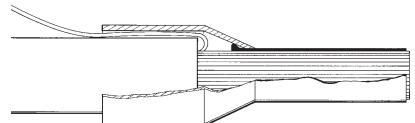

The combination of conductors, crimping material and crimping tool must be coordinated: this procedure is all the more difficult given the large number of products on the market.

This means that the material must be defined and the crimping result tested, ensuring that the test, and later on the tool, satisfy the same conditions.

Single conductor squeezed off

Single conductor pushed back

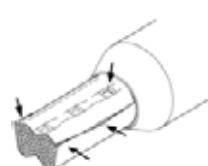

Faults which can occur during crimping:

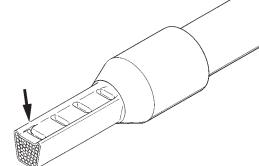

- Cracks along the sides and die impressions
- Splitting of the ferrules
- Asymmetrical crimping shape
- Extreme burrs formed along the sides
- Ferrule not filled by the conductor
- Single conductors pushed back protruding from the collar
- Single conductors squeezed off
- Plastic collar damaged by the crimping jaw
- Conductor insulation not pushed into the plastic collar
- Ferrule bent longitudinally after crimping

Note:

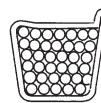

The ferrule must not split open after it has been connected once in any Weidmüller terminal corresponding to the conductor cross-section (with a torque according to IEC 60947-1)

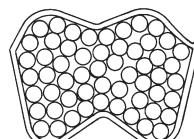

Formation of cracks at the sides. Sides split open

Formation of cracks at the impressions of the crimping jaw

Asymmetrical crimping shape
Burr formation on one side

Asymmetrical crimping shape
Burr formation on one side

Crimping and cutting tool for wire end ferrules

Crimping and cutting tool for wire end ferrules

- Cutting
- Stripping
- Crimping
- Conductor entry sideways
- Wire end ferrules according to DIN 46228-4
- Ratchet for precise crimping
- Efficient operation:
Change of tools not necessary, therefore significant saving of time
- automatic transport of wire end ferrules
- Only wire end ferrules in strips of 50 pieces may be used with this tool. The use of wire end ferrules on reels can lead to damage.

stripax® plus 2.5

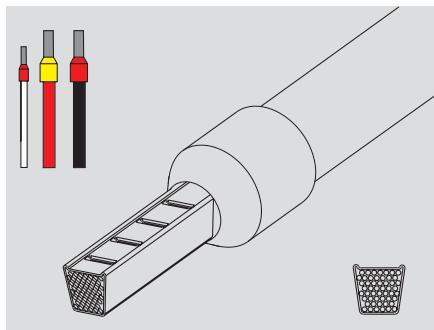

Cutting, stripping and crimping tool for wire end ferrules

Cutting, stripping and crimping tool for linked wire end ferrules on strip with 0.5...2.5 mm² (~AWG 20...14) from Weidmüller

- Easy handling of wire end ferrules
- Automatic feeding of wire end ferrules

Crimping tools for connectors

Fast feed helps pre-centering and extraction of the connecting parts

- Precision engineering means high pressing force with little physical effort
- Mechanical functions lead to safe and manageable work at different environmental conditions
- Ratchet for proper crimping
- Release mechanism in case of incorrect operation
- Locked hand lever guards against danger of injuring while transporting
- The set of crimp inserts is large and conforming to standards

Customised crimp inserts available on request.

MTR 35 – MTR 110

Crimping tool for tube cable lugs, rolled CU, AL connectors and wire end ferrules

MTR 160 – MTR 300

Crimping tool for tube cable lugs, rolled CU, AL connectors and wire end ferrules

D

Crimping tools for connectors such as

- Tube-type cable lugs of 6...120 mm²
- Rolled CU-connectors of 6...70 mm²
- Wire end ferrules from 25...95 mm²
- Retractable head for easy withdrawal of crimped connection

Crimping tools for connectors such as

- Tube-type cable lugs of 10...300 mm²
- Rolled CU-connectors of 10...150 mm²
- Retractable head for easy withdrawal of crimped connection (only MTR 300)

Punch Down Tool – PDT

The Punch Down Tool offers the following features:

- Mechanism made from metal parts
- Adjustable pressing power for conductor sizes AWG 20 to AWG 28
- Different punch down blades for terminal blocks
 - type 110 by AT&T
 - type 66
 - type LSA Plus by Krone (standard and scissors cutting function) and for telephone sockets 630A6
- Clip-in blade with 2 functions:
 - punching down or
 - punching down and cutting off the protruding conductor
- Storage space for 1 blade

RT 1**Cable tie tool**

The RT 1 is a compact, pistol-shaped tool for fastening and cutting cable-ties in one operation. The tension is widely adjustable, ranging from short to standard cable-ties. The RT 1 is designed for bundles with a diameter of 1.6 mm to 100 m.

WSM TOOL automatic**Cable tie tool****WSM-Tool automatic**

The WSM-Tool automatic is used for tightening steel cable ties and automatically cutting off the excess length of tie in one operation.

WSM TOOL manual**Cable tie tool****WSM-Tool manual**

The WSM-Tool manual is used for tightening the steel cable ties only; afterwards, the overhanging end of the tie is removed by twisting it through 90°.
