Striebel & John – Your specialists for electrical distribution systems

Within just a few years of its foundation in 1958, Striebel & John had already become the renowned manufacturer of electrical distribution systems that it is today.

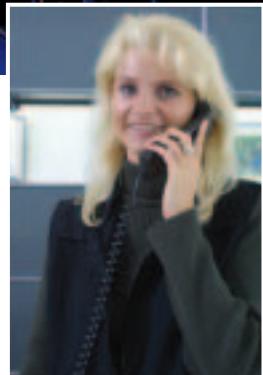

Right from the outset, Striebel & John maintained close contacts and promoted the in-depth exchange of ideas with skilled electricians. This partnership has paid dividends for both ourselves and our customers.

We develop and produce custom electrical distribution systems for all types of buildings – from single family homes to industrial complexes. In all cases we pursue the principle of modularity: The Striebel & John modular system allows a highly flexible configuration of distribution board combinations. Practical detailed solutions enable rapid and flexible installation.

Our wide and refined range of products meets all requirements with regard to ease of installation, ease of assembly and user-friendliness.

The Striebel & John training and administration centre.

For further information,
just call
(+49) (0) 78 41 - 609 - 0

We supply:

- A full range of cabinets and distribution boards
- An intelligently designed configuration and wiring system
- An application-specific software package

ABB Low Voltage Products - the complete solution

ABB is a market leader in low voltage applications. We offer one of the largest ranges of high quality products and systems available from any single supplier, backed up by in-depth application know-how. In putting together its portfolio, ABB has taken care to address not only the core technology but also the systems and services that support customers across the total life cycle. ABB supplies not just electrical distribution board systems but everything that you require for your practical installation work.

ABB Striebel & John Cabinets are designed to allow fast and simple solutions for incorporating ABB Low Voltage Products such as:

Breakers:

air circuit breakers, moulded-case circuit breakers.

Switches and fusegear:

switch fuses, HRC fuse links, fuse bases, fuse switches, switch fuse disconnectors in tier type, fuse monitors.

Line Protection Devices:

modular components and systems with protection, switching, control and measuring functions, accessories for connection and installation, manual motorstarters.

Take advantage of the variety from Striebel & John

From a multiple-family apartment building to industrial buildings – wherever electricity is metered and distributed, you will find efficient Striebel & John products in use. Of course, we also offer a wide range of special solutions for electrical distribution, for example stainless steel enclosures, switchgear cabinets in special dimensions, panelboards, housings, consoles etc.

Our success is based on the principle of modularity. The Striebel & John building block principle opens an infinite number of possibilities to you.

Our technical sales staff will be pleased to help you further and are sure to have a solution for you at hand.

Our strength

Our close cooperation with practising electrical specialists has made us a sought-after manufacturer and partner. We do all we can to contribute to the success of electrical practitioners by offering a wide range of products which could not be easier to install, assemble or use. We also support our partners by providing product training sessions so that they can find out how to make the most of the assembly benefits of our product range.

Residential

- Single family homes
- Multiple family apartments
- Terraced houses
- etc.

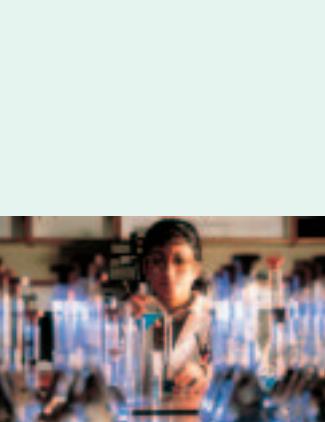

Large buildings

- Airports
- High-rise buildings
- Residential developments
- Railway stations
- etc.

Industrial buildings

- Office and administration complexes
- Storage halls
- Production halls
- Catering
- etc.

Special projects

- Commercial buildings
- Central switchboards, e.g. for post offices
- Control panelboards, e.g. for banks and churches
- etc.

Trade fairs

Trade fairs are always something special. This is not only because of the innovations on show, but also because they offer the opportunity to establish and cultivate contact with a number of people face to face. Trade fairs are meeting places where experts and practitioners can share their experience. Our product range is regularly represented at all the big trade fairs and regional specialist shows, both at home and abroad.

You can find us on the following trade fairs world-wide:

- | | |
|---------------------------|-----------|
| ■ Light & Building | Frankfurt |
| ■ Hannover Fair | Hannover |
| ■ Automation World | Houston |
| ■ Matalec | Madrid |
| ■ Middle East Electricity | Dubai |
| ■ Elcom | Kiev |
| ■ Elektro | Moscow |
| ■ SAABB | Riyadh |

Voltimum

"The place to be for electrical installation technology"

Together with other leading manufacturers, Striebel & John runs a central Internet gateway by the name of Voltimum, which provides all the information you could need about modern electrical installation technology.

Visit **www.voltimum.com** to find data, information and documents relating to electrical installation technology products and services quickly and easily.

Comprehensive Information

At Striebel & John, dialog with the practitioners who actually use our products is very important. This is why our brochures and catalogues are designed around the needs of our customers. We have combined product information for all fields and targeted it towards installation engineers, planners, switchgear manufacturers and electrical wholesale dealers. Our catalogues and brochures provide information that you will find useful in your day to day work.

Main Catalogues

The main catalogues Part 1, Part 2 and Part 3 present Striebel & John's entire range of products, from consumer units for domestic buildings to wall and floor-standing cabinets for large building complexes, through to modular switchgear cabinets for powerful industrial plants. The contents of the catalogues have been adapted to the specific needs and requirements of the relevant individual groups of consumers and areas of application. The catalogues also provide comprehensive information on configuring, costing and assembling electrical distribution systems. Technical specifications, notes on standards and much more, complete the catalogues and ensure that they are an indispensable tool for the electrical specialist. All our catalogues can be ordered in a print version, or can be downloaded as a PDF file from our Website at www.striebelundjohn.com.

Distribution Board Pocket Guide

This hand-size brochure is a great help - where it can be used to choose the right products for the job (on a construction site, for example). Data and prices relating to electric circuit distribution boards, consumer units, modular cabinet systems, distribution panels, floor-mounted distribution boards and important accessories is presented clearly and concisely. The brochure is available in a print version, or as download from the Website at

www.striebelundjohn.com.

Product Brochures

In addition to our Main Catalogues, we also offer other product brochures. The technical specifications and comprehensive product information they contain provide you with valuable support when planning and configuring our distribution systems. The brochures are available in a print version or as download from the Website at www.striebelundjohn.com.

Quality Management at Striebel & John

The standard for quality at Striebel & John orients itself on the high demands of our customers.

Striebel & John is an innovative company, placing its customers demands, with respect to products and services, in the focus of its thinking and daily business. Aspects like environmental management, occupational safety, and fire protection divisions are embedded in our quality management system. Striebel & John is certified in accordance with both ISO 9001 and ISO 14001. Quality awareness, high motivation, and the exemplary flexibility of our employees during their daily work, guarantees the constant improvement of customer satisfaction, and of our operational processes.

We are thereby pursuing our corporate aims:

- Success through satisfied customers
- Quality through motivated staff
- Joint efficiency with reliable partners
- Taking social responsibility and preserving our natural living conditions
- Corporate success through efficient business processes

ENVIRONMENTAL POLICY is very important at Striebel & John

Our company is situated in one of our region's most attractive landscapes. With this in mind, Striebel & John frequently has to deal with environmental matters and has practised environmental management based on the

internationally recognised standard for environmental management systems, namely DIN EN ISO 14001 that covers the entire industry. The management system helps to improve our products' safety and environmental compatibility. The products are developed, manufactured and inspected in such a way that all safety, environmental and reliability requirements are guaranteed. Customers receive only products and services which have been proved to fulfil these exacting demands.

Customer Training - Support That Can Be Used In Practice

Opportunities for further training in the area of electrical distribution system technology and specific product training sessions have always been part of the Striebel & John tradition - and still are to this day. As an innovative manufacturer of electrical distribution systems, we help our customers to extract the maximum possible benefit from those systems' distinctive assembly features. The aim of the training sessions is to provide information in a manner that can be understood, and to impart knowledge by means of practical exercises. This is why our customer training sessions are based on a highly practical approach with just the right amount of theory.

Product Training Sessions

Participants in these sessions are given a comprehensive overview of all Striebel & John products, from distribution boards to consumer units, wall and free-standing cabinets and modular switch cabinets. They learn about the installation and assembly benefits of our practical detailed solutions and are made familiar with Striebel & John system technology. The two-day training session also includes a demonstration of the StrieSoft planning software package.

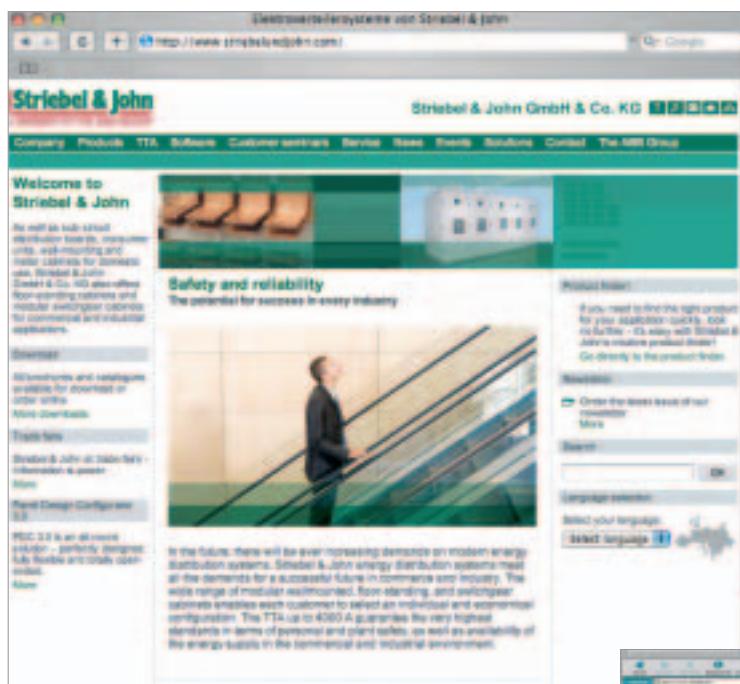

Planning Software Training Sessions

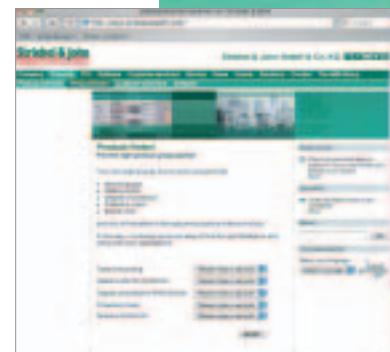

Striebel & John planning software comprises the Panel Design Configurator 3.0 and the StrieSoft tools, which together represent a modular software package for professional, efficient processing of quotations and projects. This software package supports modern distribution board manufacturers in carrying out efficient planning, reliable calculations, cost-effective administration and quick and easy archiving. Striebel & John offers training sessions on both of these tools.

www.striebelundjohn.com

Go online to find valuable, useful information. Our homepage provides an overview of our company, our products and our services. Our download area contains current product brochures and the latest technology from the world of electrical distribution systems.

For our registered and TTA-partners, we have set up a "Premium Forum". Here you will find additional information such as documentation, mounting instruction and software.

The product finder - with few clicks to the correct product

You can download or order our current product brochures from www.striebelundjohn.com.

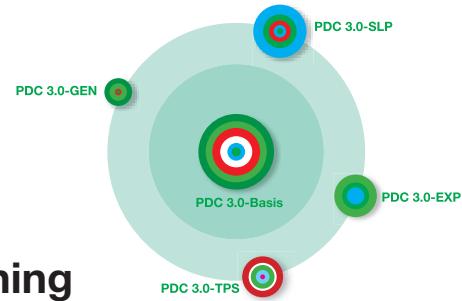

Striebel & John Newsletter

NEW!

Our electronic newsletter provides you with information about products, services and all other news relating to sales. Fast and up to date - with the newsletter, you always know the latest developments.

Panel Design Configurator 3.0 – an all-round solution for project planning

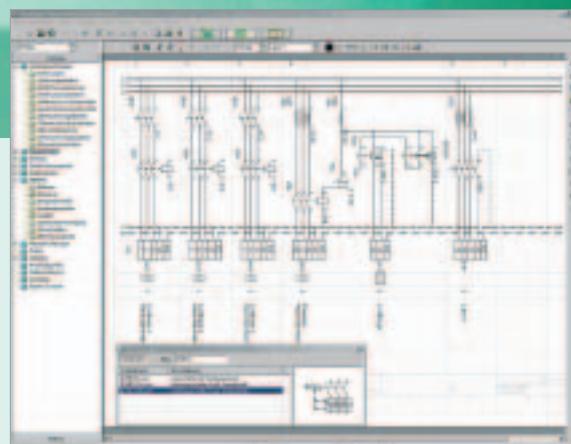

NEW!

Panel Design Configurator 3.0 is an all-around solution – perfectly designed, fully flexible and totally open-ended. The software is just the thing for the complete planning and design of electrical distribution systems and switchgear. You can use efficient offer documentation including part lists, design and circuit diagrams. With PDC 3.0 you can work faster, better and more efficiently.

It all revolves around Panel Design Configurator-Basis. The free basic version makes it easy to draw up offers, produce front views and do much more. The Add-on modules expand your areas of expertise. PDC-SLP is ideal for drawing perfect circuit diagrams. PDC-EXP can be used to export data to various applications. PDC-GEN for generating user-defined symbols. And PDC-TPS for planning and projecting of switchboard solutions from 1250 A up to 4000 A, completes the range of functions offered by Panel Design Configurator 3.0.

PDC 3.0 – project planning made simple

PDC 3.0-SLP –
compiling circuit diagrams is simplicity itself

PDC 3.0 Basis – project planning made simple

Projects can be clearly managed with Windows-standard hierarchical folder structures with direct access to parts lists, circuit diagrams and front views. Projects can be displayed and processed in the parts lists or in the front view. The easy-to-use product navigator allows you to select the items and paste them in using Drag & Drop.

ADD-ON MODUL

PDC 3.0 SLP – compiling circuit diagrams is simplicity itself

The new PDC-SLP module for designing circuit diagrams will now replace the tried and tested StrieCad program. PDC-SLP combines the simple, modern interface of PDC with the tried and tested functions of StrieCad, while offering a wide range of new functions for compiling circuit diagrams. PDC-SLP offers maximum flexibility in planning projects.

ADD-ON MODULE

PDC-EXP – data exports in various formats

Panel Design Configurator-EXP is available for exporting data to other application programs. Offers, parts lists, circuit diagrams and front views can be transmitted in various formats. Circuit diagrams and plan views are exported in DXF format. Offers and parts lists are exported in Acrobat PDF, RTF, Word, Excel or Text formats.

ADD-ON MODULE

PDC-GEN – generate your own symbols

You can produce your own symbols using the symbol generator module. The free basic version of Panel Design Configurator 3.0 comes with over 5,000 graphical symbols. Another 1,500 symbols are contained in the add-on module Panel Design Configurator-SLP. If you wish to add other vital symbols to your designs, the symbol generator is the tool you need to create them.

ADD-ON MODULE

PDC-TPS – TriLine-R Power Solutions

This add-on, available to registered and TTA-partners, incorporates all the information required to plan switchboards with higher rated currents. From 1250 A to 4000 A you can plan your layout and calculate your project quickly and effectively. Whether you are planning your incoming circuit breaker, outgoing breakers or fuse switch disconnectors, this add-on allows you to configure according to your requirements and provides you with front views and parts lists accordingly.

Do you require more detailed information?

If you would like further information or if you have more detailed questions on any aspect of PDC 3.0, please call us or send a mail to info.desuj@de.abb.com. You can find more information about PDC 3.0 or download the current PDC 3.0 Basis software on our website www.striebelundjohn.com. Would you like more information how to get one of the add-on modules, please fill in the registration form also on the website. We would be happy to help you further.

Fire Protection Cabinets

Cabinets for Fire Prevention

On average, a fire starts in Germany approximately every three minutes. Lives are put at risk and the financial cost in terms of the damage caused is high.

It is not only the people actually in charge of the building who are responsible for fire prevention. In planning and designing switchgear installations, expert electrical planners and engineers or switchgear manufacturers have a duty to ensure that their systems cannot cause a fire. In electrical switchgear,

- loose terminals
- short circuits
- electrical arcs
- overloads
- insulation faults
- and the effects of lightning

can all cause a fire to break out. This means that it is also the operator's responsibility to check, maintain and, if necessary, upgrade the electrical installation at specified intervals.

In the case of technical installations in industrial environments or building complexes that house a large number of people, such as airports, train stations, residential homes, hospitals or hotels, it is extremely important that the operational reliability of an electrical system is maintained even during a fire. After all, without lighting in escape routes, methods of communication such as telephones, emergency call or alarm systems, life support systems in hospitals, or IT control systems for manufacturing processes, getting people to safety would be an impossible task. Also, rescue workers would not be able to use the technical infrastructure to protect people as they fled.

The technical requirements for fire protection are set out in the German basic legal regulations for buildings (MBO, the Model Building Regulation, and MLAR, the cabling system design directive). Section 3.2.1 of the MLAR regulates the behaviour of measuring and distribution systems in the event of fire, in terms of their ability to isolate fires from escape and rescue routes over a required period of time (in accordance with Classification I30).

In Section 5.1.2, the MLAR outlines the regulations for the ability of electrical systems to retain their function in the event of fire, which also includes the cables of the essential safety installations that are connected to them, over a required period of time (in accordance with Classification E30/E90).

Striebel & John offers an innovative cabinet system for fire prevention, which is constructed from fireproof materials, features optimum technology and is available in a variety of economical designs.

A wide range of wall cabinets (flush/surface/enclosure) and floor standing cabinets (surface) is available in a variety of cabinet sizes.

- 1) Level of interior fire protection, fire resistance duration of at least 30 min. To check the I30 classification of the fire protection cabinets, testing has been carried out in accordance with DIN 4102 Part 11. The electrotechnical interior fittings have been tested in accordance with DIN EN 60439-1 (VDE 0660-500), Section 8.2.1; compliance with the limit overtemperature has been verified under standard operating conditions.
- 2) Level of exterior fire protection, fire resistance duration of at least 30/90 mins. To check the E30/E90 classification of the fire protection cabinets, testing has been carried out in accordance with DIN 4102 Part 12. The electrotechnical interior fittings have been tested in accordance with DIN EN 60439-1 (VDE 0660-500), Section 8.2.1; compliance with the limit overtemperature has been verified under standard operating conditions.

Striebel & John has expanded its range to include fire protection enclosure cabinets, wiring cabinets and protective cover doors which, in addition to having a fire resistance duration that conforms to DIN 4102 Part 2 (F30/F90), also guarantee to check fire load (I30/I90) and maintain functionality (E30/E90).

A2 Material class with surface design

F30 Fire resistant for over 30 minutes

I30 Check fire loads for over 30 minutes

E30 Maintain functionality for over 30 minutes

F90 Fire resistant for over 90 minutes

I90 Check fire loads for over 90 minutes

E90 Maintain functionality for over 90 minutes

Fire Protection Cabinets

General Technical Data

Technical parameters:

Safety-related requirement: 1) Level of interior fire protection, fire resistance duration of at least 30 min.

To check the I30 classification of the fire protection cabinets, testing has been carried out in accordance with DIN 4102 Part 11. The electrotechnical interior fittings have been tested in accordance with DIN EN 60439-1 (VDE 0660-500), Section 8.2.1; compliance with the limit overtemperature has been verified under standard operating conditions.

2) Level of exterior fire protection, fire resistance duration of at least 30/90 min. To check the E30/E90 classification of the fire protection cabinets, testing has been carried out in accordance with DIN 4102 Part 12. The electrotechnical interior fittings have been tested in accordance with DIN EN 60439-1 (VDE 0660-500), Section 8.2.1; compliance with the limit overtemperature has been verified under standard operating conditions.

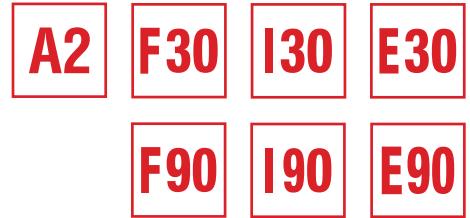

Mounting type:	Flush wall mounting Surface wall mounting Surface floor mounting
Cabinets:	Highly compressed, multi-layer fire protection plates (DIN 4102-1) made from "A2" class material, fireproof, impervious to smoke
Surface:	Light grey coating similar to RAL 7035 edges with contrasting colours
Door:	Door can be right or left-hinged 180° opening angle
Locking:	With metallic swivel handle, ready for use with a DIN semi cylinder
Interior:	Ready for integration of distribution panels and TNF modular system panels
Cable entry:	Above/below as required, or on both top and bottom
Standard ventilation:	Ventilation closes automatically in the event of fire
Additional ventilation:	Ventilation aperture with ventilator including power supply Ventilation aperture with smoke detector
Additional features:	IP54, Plinth Cable cooling unit Various surface designs

Standards/regulations	
DIN EN 60439-1 (VDE 0660-500)	X
DIN 43880 (modular devices)	X
Degree of protection	IP41 (IP54)
Installation site/environment	Interior
Mean ambient temperature over 24 hours	+ 35°
Maximum ambient temperature	+ 40°
Minimum ambient temperature	- 5°
Relative air humidity, long-term	50%/40%
Relative air humidity, short-term	100%/25°

Electrical characteristics	
Rated impulse withstand voltage U_{imp}	III/6 kV
Degree of pollution	3
Protection class	I
Rated peak withstand current I_{pk} 0.1 sec	max. 25 kA
Rated short-time current I_{cw} 1.0 sec	max. 12 kA
Rated frequency	50 - 60 Hz
Rated insulation voltage U_i	690 V
Rated operating voltage AC U_e	400 V

Fire Protection Cabinets

Standard Equipment

- Material plus surface – A2
- Fire resistance F30/F90
- Maintain functionality E30/E90
- Check fire load I30/I90
- Protection class I (II)
- IP41 degree of protection
- Impervious to smoke

- Ventilation system

Ventilation with thermal lock triggering for cabinets 2 or more panels wide

- Changeable door hinge

The door hinge can be easily swapped over- to make use of this feature, the hinges are simply unscrewed from the door jamb and screwed into the wall jamb on the opposite side. The door is attached

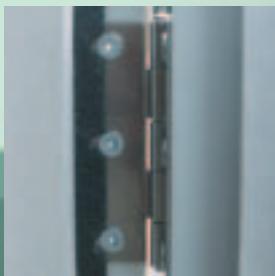

using the predrilled mounting holes in the door and the cabinet body.

- Cable bulkhead for inserting cable bundles

Cables are inserted using a bulkhead which covers the total width.

Cables with an external diameter of up to 70 mm or bundles of cables can be inserted. The flexible bulkhead material automatically creates a seal around the area which is not being used. The cable bulkheads are available in versions for feeding in cables from above, below, or from above and below.

- Removable stainless steel hinges

High-quality stainless steel hinges with a removable pivot pin allow the door to be easily detached. Thus, the amount of weight can be considerably reduced for transportation purposes if required.

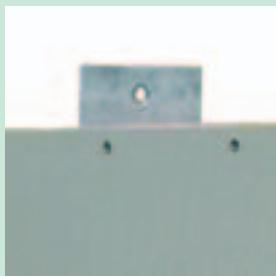

- Swivel handle locking

Swivel handle with stainless steel appearance, on the centre of the door, designed for use with DIN semi cylinders - can be integrated into domestic locks

Fire Protection Cabinets

Standard Equipment

■ Mounting brackets

The fire protection cabinets (with the exception of flush mounted types) are screwed to the wall behind using two mounting brackets that are attached to the top of them. This allows cabinets whose

equipment has already been installed to be quickly and easily mounted.

- Cabinets are empty and ready for integration of distribution or TNF modular system panels
- Doors easily detachable – removable pivot pin
- Reduction in weight thanks to door removal
- 180° door opening angle
- Can be locked using door closure rod, 2-point lock
- If necessary, cabinet can be disassembled
- Light grey coating , similar to RAL7035, edges with contrasting colours
- High chemical resistance
(surface characteristics conforming to EN 438-2)
- High mechanical stability and resistance
Brinell hardness: 50 N/mm²
- High material density - 1450 kg/m³

Function

- Material with A2 surface coating – fireproof, tested in accordance with DIN 4102 Part1
- Fire resistance F30/F90, tested in accordance with DIN 4102 Part 2
- Check fire load I30/I90 in accordance with DIN 4102 Part 11
- Maintain functionality E30/E90 in accordance with DIN 4102 Part 12
- IP41 degree of protection
- Impervious to smoke

Construction features

- Flush mounting
- Changeable door hinge
- Detachable door, reducing overall weight of cabinet
- Can be locked using swivel handle sash lock
- Cable entry from above and below
- Internal door
- 180° door opening angle
- Integrated system for accommodating TNF modular system panels and distribution panels

Surface

- Light grey coating, similar to RAL7035, edges with contrasting colours
- High chemical resistance
- High mechanical stability and resistance

Cabinet for floor mounting

Function

- Material with A2 surface coating – fireproof, tested in accordance with DIN 4102 Part 1
- Fire resistance F30/F90, tested in accordance with DIN 4102 Part 2
- Check fire load I30/I90 in accordance with DIN 4102 Part 11
- Maintain functionality E30/E90 in accordance with DIN 4102 Part 12
- IP41 degree of protection
- Impervious to smoke

Construction features

- Floor mounting
- Changeable door hinge
- Removable stainless steel hinges make door detachable (reduction in weight)
- Can be locked using door closure rod
- Cable bulkhead for inserting cable bundles
- Internal door
- 180° door opening angle
- Integrated system for accommodating TNF modular system panels and distribution panels

Surface

- Light grey coating, similar to RAL7035, edges with contrasting colours
- High chemical resistance
- High mechanical stability and resistance

Additional features/options

- Cable cooling unit_KSF_
- Ventilation and smoke detector – IRM
- Ventilation
- IP54 kit_SF54
- SOSF_plinth
- Various surface designs

Distribution Panels

Plastic Covers with 90° Press-and-Twist Locks
(Without Devices)

■ For installation in all modular cabinets.
Applicable standards:
DIN 43870

■ The grid units of the distribution panels or
panel combinations must match those of the
cabinets in which they are to be installed.

Equipping distribution panels

Panels for modular DIN rail devices

Equipment:
35 x 15 mm DIN rail for installing devices and with a special hole grid for the wiring system. DIN rail spacing: 125 mm. Plastic covers. Space for DIN 43880 modular devices for 12 SU (216 mm) per panels wide.

Panels for rail mounted terminals

Equipment:
35 x 15 mm DIN rail for terminals with a special hole grid for the wiring system. DIN rail spacing: 125 mm. Plastic covers. Use ZK90P2 insulating pieces to mount DIN rails in a double insulated manner. Use ED33P2 deep mounting brackets to mount DIN rails in a recessed position.

Panels with mounting plates

Equipment:
Mounting plate made from ST1203 2 mm sendzimir-galvanised sheet steel. The mounting plate is mounted on deep mounting brackets and the depth can be steplessly adjusted. Maximum installation depth between mounting plate and cover: 143 mm (please note cabinet depth). Plastic covers (closed covers).

Panels for touch protection (or for custom assembly)

Equipment:
Blank panel without installation material, plastic covers (closed covers).

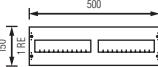

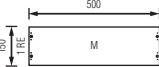

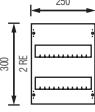

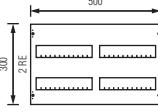

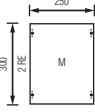

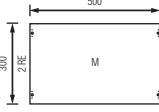

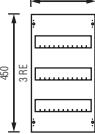

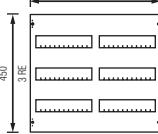

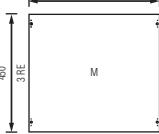

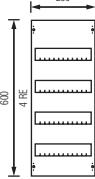

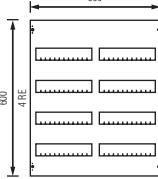

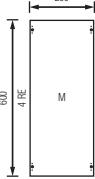

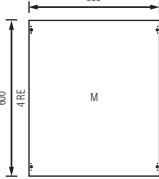

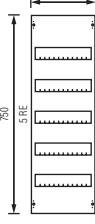

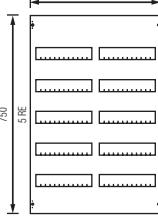

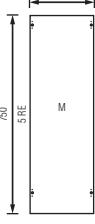

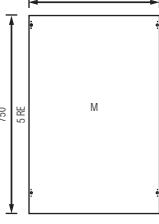

Panels with busbars

Equipment:
5-pole busbar system
12 x 5 Cu, 250 A, busbar spacing: 40 mm, plastic covers (closed covers).

Cabinet for mounting over existing distribution boards

Function

- Material with A2 surface coating – fireproof, tested in accordance with DIN 4102 Part 1
- Fire resistance F30/F90, tested in accordance with DIN 4102 Part 2
- Check fire load I30/I90 in accordance with DIN 4102 Part 11
- Maintain functionality E30/E90 in accordance with DIN 4102 Part 12
- IP41 degree of protection
- Impervious to smoke

Construction features

- Wall mounting
- Changeable door hinge
- Removable stainless steel hinges make door detachable (reduction in weight)
- Can be locked using door closure rod
- Cable bulkhead for inserting cable bundles
- Internal door
- 180° door opening angle

Surface

- Light grey coating, similar to RAL7035, edges with contrasting colours
- High chemical resistance
- High mechanical stability and resistance

Additional features/options

- Cable cooling unit_KMF
- Smoke detector+ventilation – IRM
- Technical ventilation with fan
- Various surface designs

Cabinet for wall mounting

Function

- Material with A2 surface coating – fireproof, tested in accordance with DIN 4102 Part 1
- Fire resistance F30/F90, tested in accordance with DIN 4102 Part 2
- Check fire load I30/I90 in accordance with DIN 4102 Part 11
- Maintain functionality E30/E90 in accordance with DIN 4102 Part 12
- IP41 degree of protection
- Impervious to smoke

Construction features

- Wall mounting
- Changeable door hinge
- Detachable door, reducing overall weight of cabinet
- Can be locked using door closure rod
- Cable bulkhead for inserting cable bundles (above, below, both above and below)
- Mounting brackets
- Internal door

Surface

- Light grey coating, similar to RAL7035, edges with contrasting colours
- High chemical resistance
- High mechanical stability and resistance

Additional features/options

- IP54 kit_RF54
- Various surface designs

Protective Cover Doors

For Fire Prevention

Protective cover doors VF

IP54

A2	F30	I30	E30
F90	I90	E90	

- Closure is fire-resistant and impervious to smoke
- Plate material with surface coating - fireproof
- 30 or 90-minute fire resistance
- Can be mounted on various types of wall

Protective cover doors are designed to act as a barrier between existing flush mounted wall distribution systems and escape and rescue routes (Check fire load in accordance with MLAR).

In addition, maintain functionality is ensured in the event of fire assuming that this can be properly verified.

Protective Cover Doors

For Fire Prevention

With the standard version, the distribution board may protrude by up to 20 mm from the wall. The old doors should be unhinged and removed. The protective cover door must overlap the existing distribution system by at least 115 mm, i.e., there must be 115 mm plus the thickness of the door (depending on the opening angle) all around the existing distribution system.

If the existing distribution system protrudes more than 20 mm from the wall, an additional raising frame can be ordered for the protective cover door.

Tested material with surface coating
DIN 4102 Part 1; A2

Integrated frame with fastening points

Removable stainless steel hinges

Surrounded by a fire and smoke protection seal

2-point lock, operated via door closure rod

Metallic swivel handles with DIN semi cylinder

Protective Cover Doors

For Fire Prevention

Protective Cover Doors

Door depth with I30/E30 classification 51 mm

Door depth with I90/E90 classification 71 mm

A2

F30

I30

E30

F90

I90

E90

Door for use in front of existing flush distribution systems

Function

- Material with A2 surface coating – fireproof, tested in accordance with DIN 4102 Part 1
- Fire resistance F30/F90, tested in accordance with DIN 4102 Part 2
- Check fire load I30/I90 in accordance with DIN 4102 Part 11
- Maintain functionality E30/E90 in accordance with DIN 4102 Part 12
- Impervious to smoke
- IP54 degree of protection
- Protection class II

Construction features

- Single-leaf door
- Door opening angle approx. 180° with F30 version, approx. 150° with F90 version
- Door hung right
- Surrounding wall adjustment frame (W x D: 115 x 28 mm) with fastening holes
- Doors open on frame
- Can be locked using metallic swivel handle, ready for use with DIN semi cylinder
- 2-point lock, operated via door closure rod
- Stainless steel hinges with removable pivot pin for removing the wing of the door
- Fastening material: Frame plugs and screws included in scope of delivery

Surface

- Light grey colour, similar to RAL7035, edges with contrasting colours
- High chemical resistance
- High mechanical stability and resistance, Brinell hardness 50 N/mm²
- High material density - 1450 kg/m³
- Surface characteristics conforming to EN 438-2

Additional features/options

- Additional adjustment frames for greater coverage
- Various surface designs
- Metallic square pin lock
- Door hung left

For your notes

Type Code/Configuration Example

Type code

Type 2/4AF3020

Panels wide (2 = PW2)

Overall height (4 = OH4)

Cabinet type (AF = surface mounted wall cabinet)

Fire protection (F)

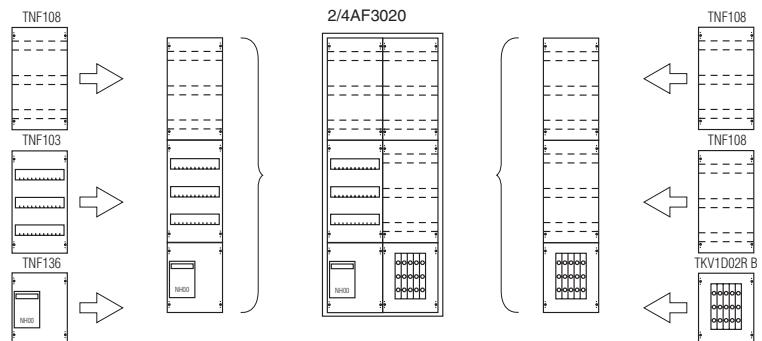

External cabinet depth (3 = 324 mm)

Door hinge and ventilation/door hinge right, ventilated (only unventilated in 1 panel wide cabinets)

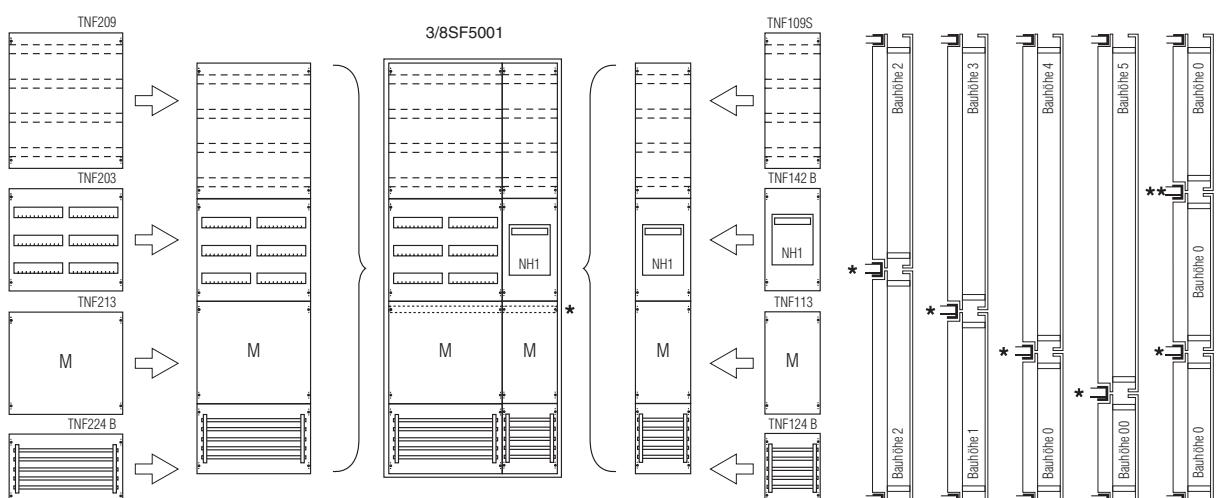

Cable entry/both top and button (0 = top/1 = bottom/2 = both)

Fire resistance duration/30 min. (0 = 30 min./1 = 90 min.)

Configuration example: Surface mounted wall cabinet AF

Configuration example: Floor standing cabinet SF

Note:

With TNF modular system panels, you must incorporate at least one panel division across the entire width of the panel in accordance with the overall height (= centre mounting rail).

* Centre mounting rail in 150 mm grid can be adjusted up and down

** Centre mounting rail and other mounting systems to be ordered separately as accessories

General Conditions for the Supply of mechanical, electrical and electronic products

Brussels August 2000

1. GENERAL CONDITIONS

PREAMBLE

1. These General Conditions shall apply when the parties agree in writing or otherwise thereto. When the General Conditions apply to a specific contract, modifications of or deviations from them must be agreed in writing.

The object(s) to be supplied under these General Conditions is (are) hereinafter referred to as the Product. Wherever these General Conditions use the term in writing, this shall mean by document signed by the parties, or by letter, fax, electronic mail and by such other means as are agreed by the parties.

PRODUCT INFORMATION

2. All information and data contained in general product documentation and price lists, whether in electronic or any other form, are binding only to the extent that they are by reference expressly included in the contract.

II. DRAWINGS AND DESCRIPTIONS

3. All drawings and technical documents relating to the Product or its manufacture submitted by one party to the other, prior or subsequent to the formation of the contract, shall remain the property of the submitting party. Drawings, technical documents or other technical information received by one party shall not, without the consent of the other party, be used for any other purpose than that for which they were provided. They may not, without the consent of the submitting party,

otherwise be used or copied, reproduced, transmitted or communicated to a third party. 4. The Supplier shall, not later than at the date of delivery, provide free of charge information and drawings which are necessary to permit the Purchaser to erect, commission, operate and maintain the Product. Such information and drawings shall be supplied in the number of copies agreed upon or at least one copy of each. The Supplier shall not be obliged to provide manufacturing drawings for the Product or for spare parts.

III. ACCEPTANCE TESTS

5. Acceptance tests provided for in the contract shall, unless otherwise agreed, be carried out at the place of manufacture during normal working hours. If the contract does not specify the technical requirements, the tests shall be carried out in accordance with general practice in the appropriate branch of industry concerned in the country of manufacture.

6. The Supplier shall notify the Purchaser in writing of the acceptance tests in sufficient time to permit the Purchaser to be represented at the tests. If the Purchaser is not represented, the test report shall be sent to the Purchaser and shall be accepted as accurate

7. If the acceptance tests show the Product not to be in accordance with the contract, the Supplier shall without delay remedy any deficiencies in order to ensure that the Product complies with the contract. New tests shall then be carried out at the Purchaser's request, unless the deficiency was insignificant.

8. The Supplier shall bear all costs for acceptance tests carried out at the place of manufacture. The Purchaser shall however bear all travelling and living expenses for his representatives in connection with such tests.

DELIVERY. PASSING OF RISK

9. Any agreed trade term shall be construed in accordance with the INCOTERMS in force at the formation of the contract. If no trade term is specifically agreed, the delivery shall be Ex works (EXW).

If, in the case of delivery Ex works, the Supplier, at the request of the Purchaser, under-

takes to send the Product to its destination, the risk will pass not later than when the Product is handed over to the first carrier. Partial shipments shall be permitted unless otherwise agreed.

TIME FOR DELIVERY. DELAY

10. If the parties, instead of specifying the date for delivery, have specified a period of time on the expiry of which delivery shall take place, such period shall start to run as soon as the contract is entered into, all official formalities have been completed, payments due at the formation of the contract have been made, any agreed securities have been given and any other preconditions have been fulfilled.

11. If the Supplier anticipates that he will not be able to deliver the Product at the time for delivery, he shall forthwith notify the Purchaser thereof in writing, stating the reason, and, if possible, the time when delivery can be expected. If the Supplier fails to give such notice, the Purchaser shall be entitled to compensation for any additional costs which he incurs and which he could have avoided had he received such notice.

General Conditions for the Supply of mechanical, electrical and electronic products

Brussels August 2000

12. If delay in delivery is caused by any of the circumstances mentioned in Clause 39 or by an act or omission on the part of the Purchaser, including suspension under Clauses 20 or 42, the time for delivery shall be extended by a period which is reasonable having regard to all the circumstances in the case. This provision applies regardless of whether the reason for the delay occurs before or after the agreed time for delivery.

13. If the Product is not delivered at the time for delivery (as defined in Clauses 10 and 12), the Purchaser is entitled to liquidated damages from the date on which delivery should have taken place.

The liquidated damages shall be payable at a rate of 0.5 per cent of the purchase price for each completed week of delay. The liquidated damages shall not exceed 7.5 per cent of the purchase price.

If only part of the Product is delayed, the liquidated damages shall be calculated on that part of the purchase price which is attributable to such part of the Product as cannot in consequence of the delay be used as intended by the parties.

The liquidated damages become due at the Purchaser's demand in writing but not before delivery has been completed or the contract is terminated under Clause

14. The Purchaser shall forfeit his right to liquidated damages if he has not lodged a claim in writing for such damages within six months after the time when delivery should have taken place.

15. Liquidated damages under Clause 13 and termination of the contract with limited compensation under Clause 14 are the only remedies available to the Purchaser in case of delay on the part of the Supplier. All other claims against the Supplier based on such delay shall be excluded, except where the Supplier has been guilty of a negligent breach of a

condition which goes to the root of the contract ("wesentliche Vertragspflichten"), intent or gross negligence.

In these General Conditions gross negligence shall mean an act or omission implying either a failure to pay due regard to serious consequences, which a conscientious supplier would normally foresee as likely to ensue, or a deliberate disregard of the consequences of such act or omission.

16. If the Purchaser anticipates that he will be unable to accept delivery of the Product at the delivery time, he shall forthwith notify the Supplier in writing thereof, stating the reason and, if possible, the time when he will be able to accept delivery.

If the Purchaser fails to accept delivery at the delivery time, he shall nevertheless pay any part of the purchase price which becomes due on delivery, as if delivery had taken place. The Supplier shall arrange for storage of the Product at the risk and expense of the Purchaser. The Supplier shall also, if the Purchaser so requires, insure the Product at the Purchaser's expense.

17. Unless the Purchaser's failure to accept delivery is due to any such circumstance as mentioned in Clause 39, the Supplier may by notice in writing require the Purchaser to accept delivery within a final reasonable period.

If, for any reason for which the Supplier is not responsible, the Purchaser fails to accept delivery within such period, the Supplier may by notice in writing terminate the contract in whole or in part. The Supplier shall then be entitled to compensation for the loss he has suffered by reason of the Purchaser's default. The compensation shall not exceed that part of the purchase price which is attributable to that part of the Product in respect of which the contract is terminated.

PAYMENT

18. Unless otherwise agreed, the purchase price shall be paid with one third at the formation of the contract and one third when the Supplier notifies the Purchaser that the Product, or the essential part of it, is ready for delivery. Final payment shall be made when the Product is delivered.

Payments shall be made within 30 days of the date of the invoice.

19. Whatever the means of payment used, payment shall not be deemed to have been effected before the Supplier's account has been fully and irrevocably credited.

20. If the Purchaser fails to pay by the stipulated date, the Supplier shall be entitled to inter-

est from the day on which payment was due. The rate of interest shall be as agreed between the parties. If the parties fail to agree on the rate of interest, it shall be 8 percentage points above the rate of the main refinancing facility of the European Central Bank in force on the due date of payment.

In case of late payment the Supplier may, after having notified the Purchaser in writing, suspend his performance of the contract until he receives payment.

If the Purchaser has not paid the amount due within three months the Supplier shall be entitled to terminate the contract by notice in writing to the Purchaser and to claim compensation for the loss he has incurred. The compensation shall not exceed the agreed purchase price.

IX. RETENTION OF TITLE

21. The Product shall remain the property of the Supplier until paid for in full to the extent that such retention of title is valid under the applicable law.

The Purchaser shall at the request of the Supplier assist him in taking any measures necessary to protect the Supplier's title to the Product in the country concerned.

The retention of title shall not affect the passing of risk under Clause

General Conditions for the Supply of mechanical, electrical and electronic products

Brussels August 2000

X. LIABILITY FOR DEFECTS

22. Pursuant to the provisions of Clauses 23-37 inclusive, the Supplier shall remedy any defect or nonconformity (hereinafter termed defect(s)) resulting from faulty design, materials or workmanship.

23. The Supplier's liability is limited to defects which appear within a period of one year from delivery. If the daily use of the Product exceeds that which is agreed, this period shall be reduced proportionately.

24. When a defect in a part of the Product has been remedied, the Supplier shall be liable for defects in the repaired or replaced part under the same terms and conditions as those applicable to the original Product for a period of one year. For the remaining parts of the Product the period mentioned in Clause 23 shall be extended only by a period equal to the period during which the Product has been out of operation as a result of the defect.

25. The Purchaser shall without undue delay notify the Supplier in writing of any defect which appears. Such notice shall under no circumstance be given later than two weeks after the expiry of the period given in Clause 23.

The notice shall contain a description of the defect.

If the Purchaser fails to notify the Supplier in writing of a defect within the time limits set forth in the first paragraph of this Clause, he loses his right to have the defect remedied.

Where the defect is such that it may cause damage, the Purchaser shall immediately inform the Supplier in writing. The Purchaser shall bear the risk of damage resulting from his failure so to notify.

26. On receipt of the notice under Clause 25 the Supplier shall remedy the defect without undue delay and at his own cost as stipulated in Clauses 22-37 inclusive.

Repair shall be carried out at the place where the Product is located unless the Supplier deems it appropriate that the defective part or the Product is returned to him for repair or replacement.

The Supplier is obliged to carry out dismantling and re-installation of the part if this requires special knowledge. If such special knowledge is not required, the Supplier has fulfilled his obligations in respect of the defect when he delivers to the Purchaser a duly repaired or replaced part.

27. If the Purchaser has given such notice as mentioned in Clause 25 and no defect is found for which the Supplier is liable, the Supplier shall be entitled to compensation for the costs he has incurred as a result of the notice.

28. The Purchaser shall at his own expense arrange for any dismantling and reassembly of equipment other than the Product, to the extent that this is necessary to remedy the defect.

29. Unless otherwise agreed, necessary transport of the Product and/or parts thereof to and from the Supplier in connection with the remedying of defects for which the Supplier is liable shall be at the risk and expense of the Supplier. The Purchaser shall follow the Supplier's instructions regarding such transport.

30. Unless otherwise agreed, the Purchaser shall bear any additional costs which the Supplier incurs for repair, dismantling, installation and transport as a result of the Product being located in a place other than the destination stated in the contract or - if no destination is stated - the place of delivery.

31. Defective parts which have been replaced shall be made available to the Supplier and shall be his property.

32. If, within a reasonable time, the Supplier does not fulfil his obligations under Clause 26, the Purchaser may by notice in writing fix a final time for completion of the Supplier's obligations.

If the Supplier fails to fulfil his obligations within such final time, the Purchaser may himself undertake or employ a third party to undertake necessary remedial works at the risk and expense of the Supplier.

Where successful remedial works have been undertaken by the Purchaser or a third party, reimbursement by the Supplier of reasonable costs incurred by the Purchaser shall be in full settlement of the Supplier's liabilities for the said defect.

33. Where the defect has not been successfully remedied, as stipulated under Clause 32,

- a) the Purchaser is entitled to a reduction of the purchase price in proportion to the reduced value of the Product, provided that under no circumstance shall such reduction exceed 15 per cent of the purchase price, or
- b) where the defect is so substantial as to significantly deprive the Purchaser of the benefit of the contract, the Purchaser may terminate the contract by notice in writing to the Supplier. The Purchaser is then entitled to compensation for the loss he has suffered up to a maximum of 15 per cent of the purchase price.

34. The Supplier is not liable for defects arising out of materials provided, or a design stipulated or specified by the Purchaser.

35. The Supplier is liable only for defects which appear under the conditions of operation provided for in the contract and under proper use of the Product.

The Supplier's liability does not cover defects which are caused by faulty maintenance, incorrect erection or faulty repair by the Purchaser, or by alterations carried out without the Supplier's consent in writing.

Finally the Supplier's liability does not cover normal wear and tear or deterioration.

36. Notwithstanding the provisions of Clauses 22-35 the Supplier shall not be liable for defects in any part of the Product for more than two years from the beginning of the period given in Clause 23.

37. Save as stipulated in Clauses 22-36, the Supplier shall not be liable for defects. This applies to any loss the defect may cause including loss of production, loss of profit and other indirect loss. This limitation of the Supplier's liability shall not apply if he has been guilty of intent or gross negligence as defined in Clause 15 or if the Supplier negligently causes damage to life, body or health.

Furthermore, the limitation of liability shall not apply in cases of negligent breach of a condition which goes to the root of the contract ("wesentliche Vertragspflichten"). In the case of slight negligence the Supplier shall be liable only for reasonably foreseeable damage which is intrinsic to the contract.

Nor shall the said limitation of liability apply in the cases of strict liability under the Product Liability Act ("Produkthaftungsgesetz"), for defects of the Product causing death or personal injury, or damage to items of property used privately. Furthermore the said limitation of liability shall not apply in the case of defects the Supplier has fraudulently concealed or whose absence he has guaranteed.

XI. FORCE MAJEURE

38. Either party shall be entitled to suspend performance of his obligations under the contract to the extent that such performance is impeded or made unreasonably onerous by any of the following circumstances: industrial disputes and any other circumstance beyond the control of the parties such as fire, war, extensive military mobilization, insurrection, requisition, seizure, embargo, restrictions in the use of power and defects or delays in deliveries by sub-contractors caused by any such circumstance referred to in this Clause.

A circumstance referred to in this Clause whether occurring prior to or after the formation of the contract shall give a right to suspension only if its effect on the performance of the

contract could not be foreseen at the time of the formation of the contract.

39. The party claiming to be affected by Force Majeure shall notify the other party in writing without delay on the intervention and on the cessation of such circumstance.

If Force Majeure prevents the Purchaser from fulfilling his obligations, he shall compensate the Supplier for expenses incurred in securing and protecting the Product.

40. Regardless of what might otherwise follow from these General Conditions, either party shall be entitled to terminate the contract by notice in writing to the other party if performance of the contract is suspended under Clause 39 for more than six months.

General Conditions for the

Supply of mechanical, electrical and electronic products

Brussels August 2000

XII. ANTICIPATED NON-PERFORMANCE

41. Notwithstanding other provisions in these General Conditions regarding suspension, each party shall be entitled to suspend the performance of his obligations under the contract, where it is clear from the circumstances that the other party will not be able to per-

form his obligations. A party suspending his performance of the contract shall forthwith notify the other party thereof in writing.

XIII. CONSEQUENTIAL LOSSES

42. Save as otherwise stated in these General Conditions there shall be no liability for either party towards the other party for loss of production, loss of profit, loss of use, loss of contracts or for any other consequential or indirect loss whatsoever. The said exclusion of liability shall not apply in the case of intent or gross negligence under Clause 15 or if the Supplier negligently causes damage to life, body or health. Furthermore, the exclusion of liability shall not apply in cases of negligent breach of a condition which goes to the root of the contract ("wesentliche Vertragspflichten"). In the case of slight negligence the Supplier shall be liable only for reasonably foreseeable damage which is intrinsic to the contract.

Nor shall the exclusion of liability apply in the cases of strict liability under the Product Liability Act ("Produkthaftungsgesetz"), for defects of the product causing death or personal injury, or damage to items of property used privately. Neither does the said exclusion apply in the case of damage attributable to fraudulent concealment or despite specific guarantees.

XIV. DISPUTES AND APPLICABLE LAW

43. All disputes arising out of or in connection with the contract shall be finally settled under the Rules of Arbitration of the International Chamber of Commerce by one or more arbitrators appointed in accordance with the said rules.

44. The contract shall be governed by the substantive law of the Supplier's country.
