

## MOTOR DRIVE OUTPUT REACTORS

Motor drive output reactors are used between variable speed drives and the motor. They are used to dampen the harmonic content of the voltage generated by the motor drive.

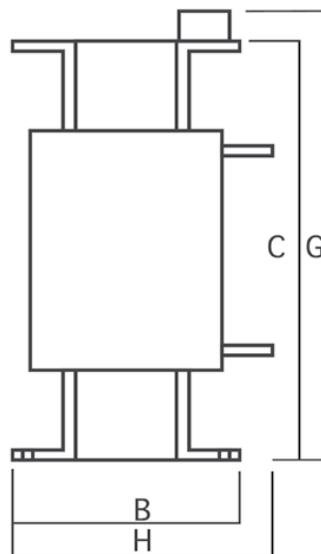

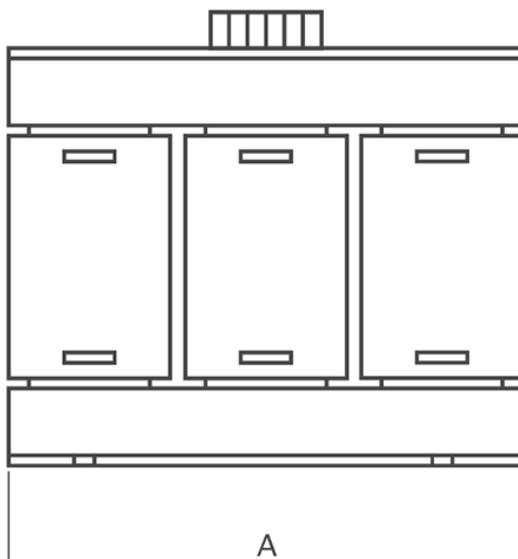

Operating voltage is up to 1000V. Maximum design current for these reactors are 500A. The connections are terminal block, bar or cable connection depending on current value

ELEKTRA reactors are compatible with international standards and CE signed. Also the reactors are produced under ISO9000 quality management system.

### ELEKTRA Motor Drive Output Reactor Specifications

- High permeable iron core
- High quality copper or aluminium windings
- High linearity
- Excellent thermal layout
- Thermal overload protection
- Vacuum impregnated varnish to ensure silent and moisture-immune operation
- CE sign and compatibility with EN 61558 2-20
- Manufactured under ISO 9000 quality management

MODEL	Current (A)	Inductance (mH)	A (mm)	B (mm)	C (mm)	G (mm)	H (mm)	Weight (kg)
